

Who we are

VO Consulting is an independent energy, environment and radiation consultancy. We collaborate with specialist consulting firms in the scientific, engineering and environmental fields to develop tailor-made services and solutions.

What we do

In the energy sector we specialise in

- techno-economic analyses and feasibility assessments
- applications of renewable energy and energy efficiency technologies
- tariff assessments & development
- consultancy services for electricity supply / distribution sectors
- energy audits and advice on energy efficiency measures, including behaviour change measures

In the environment sector we undertake

- greenhouse gas assessments
- carbon audits and quantification of the carbon footprint
- risk and climate vulnerability assessments
- feasibility and environmental services value assessments
- monitoring assignments and scientific measurements, incl. of environmental project impacts and environmental flows
- project conceptualisation to benefit from carbon credits including in the voluntary carbon markets

In the radiation sector we provide

- fit-for-purpose Radiation Management Plans
- radiological impact assessments for exploration & mining
- radiation protection and radiation safety services
- training for radiation safety officers and assistants
- instrumentation, monitoring methodology
- data analyses, exposure dose analyses and reporting

Expertise

VO Consulting's expertise is focused around three key activities that we apply in most projects:

Conceptualisation

- incubate projects, programmes and proposals
- prepare concept descriptions, including strategic planning and risk analyses
- facilitate and support planning and scenario development

Analysis

- techno-economic assessments
- numerical simulation of technical, financial and business systems and processes
- financial modelling, e.g. in support of business plans

Management

- complete life-of-project management
- conceptualise, plan and implement projects and programmes
- monitor, audit and review projects and programmes

Contact us to enhance your value proposition in an energy-, environment- or radiation-related project.
